

# Cells Review

- 1     \_\_\_\_\_     What are all living things made of?  
         (a) sunlight        (b) cells                (c) oxygen            (d) hair
- 2     \_\_\_\_\_     How many cells are there in humans?  
         (a) one                (b) two                (c) none                (d) trillions
- 3     \_\_\_\_\_     Which of the following do scientists use to see very small things?  
         (a) glasses            (b) contacts            (c) microscope        (d) telescope
- 4     \_\_\_\_\_     Which of the following are living things?  
         (a) plants            (b) animals            (c) bacteria            (d) all of the above
- 5     \_\_\_\_\_     Are rocks living things?  
         (a) yes                (b) no                (c) sometimes
- 6     \_\_\_\_\_     What is the smallest unit that can be said to be alive?  
         (a) cells                (b) atoms                (c) particles            (d) bacteria
- 7     \_\_\_\_\_     Do all living things have more than one cell?  
         (a) yes                (b) no
- 8     \_\_\_\_\_     Which of the following terms means “consisting of a single cell?”  
         (a) one-cellular    (b) one-cell            (c) unicellular        (d) none of the above
- 9     \_\_\_\_\_     Which of the following terms means “consisting of many cells?”  
         (a) many-cellular    (b) two-cell            (c) multicellular        (d) unicellular
- 10    \_\_\_\_\_     Which of the following are non-living things?  
         (a) fish                (b) shoes                (c) birds                (d) algae
